

## The Hurth- Measure / Ruler

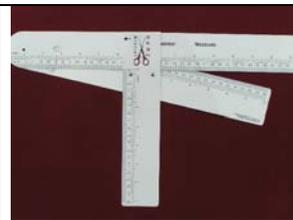

The Hurth-Measuring Tool is made of high quality plastic. A 41cm (16..inches) arm and a 30cm (12 inches) arm are at one end connected by an eyelet. The connection is movable. A third 18cm (7 inch) long arm can be slip over one of the longer arms. The scaling of the longer arm starts at the very end, the scaling of the shorter arms begins at the side of the longer arm (width of one arm).

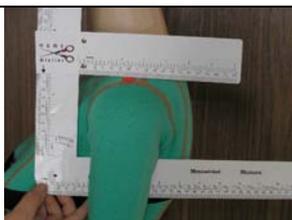

There is a helpline at the begin of the scaling to control the right angle.

The scaling is in cm and inches. Through an eye in the longer arm one can see the scaling for angles from 0-25 degrees on the shorter arm.

The flexibility of the plastic let the arms of the ruler bend on the body of the person to measure.  
**Left: armhole depth back**  
**Right: backlength to armpit**

**Left: armhole depth (distance)**

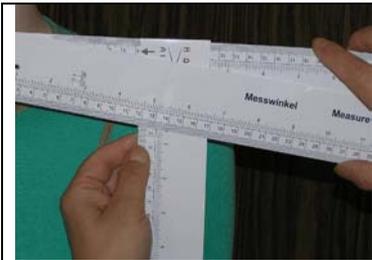

This measurement is very difficult to measure without a special tool like this.

**Left: Shoulder seam length**

**Right: Shoulder Depth**

**left and right: read the shoulder depth**

**left: Shoulder angle**

Lay the longer arm on the shoulder, hold the upper arm horizontally, and read the shoulder angle in the eye >right

**left: diameter of waist  
right: diameter of neck**

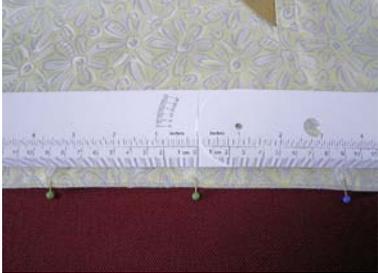

**left: depth of waist at side**

**right: depth of waist at back**

(Slip the 3rd arm over the long arm of the ruler)

**Other Utilities**

	<p>using the ruler to measure the distances from the middle to two sides, (For embroidery, marking pockets and so on.</p>	
	<p>Using the ruler to mark buttons on a vest. Find the center and measure to both sides.</p>
